

# Product Information

## Equaliser rumen buffer

A blend of buffering agents, alkalisng ingredients and flavouring to support rumen health and performance.

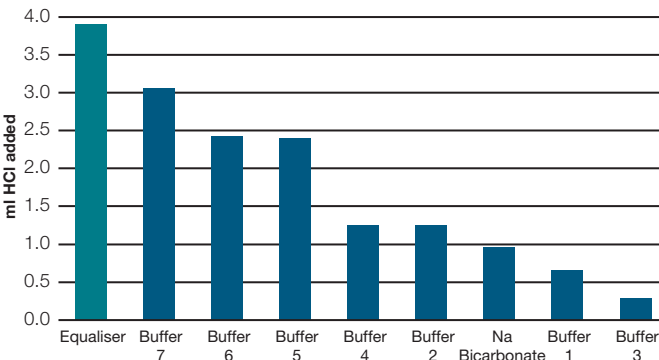

### Carefully selected ingredients - for confidence and peace of mind

- Each ingredient source is carefully selected on its buffering ability
- Ongoing screening ensures each batch of Equaliser is of the highest quality

### Works at its best when it really matters

- The most critical zone in the rumen is Ph 5-6
- Equaliser has its highest buffering capacity in this critical zone
- The graph below demonstrates how Equaliser absorbs more acid than competitors
- Equaliser has 2.65 times the buffering capacity of sodium bicarbonate

Acid required for decrease from pH 6 to pH 5

### Providing year-round support

Buffers have been traditionally associated with winter use but Equaliser can deliver benefits for the herd all year round.

#### Spring

Maintain rumen health and animal performance, especially during periods of lush grazing.

#### Summer

Maintain performance during periods of heat stress.

#### Winter

Achieve maximum performance with minimum risk on high starch/sugar diets. Deal effectively with wet, acidic silages.

#### Autumn

**Dairy:** Settle quickly to winter regime.  
**Beef:** Smooth transition to finishing diet.

### Feeding instructions

Dairy advised rate: 100 - 150g/head/day

Beef advised rate: 80 - 100g/head/day
